Assignment 0119

This initial assignment is meant to get you started and ready to do some development.

Outcomes

This assignment will affect your proficiency measures for outcomes *4d-4f*.

For Submission

Free Private GitHub Repository for Students

Acquire a GitHub account *using your LMU email address* then connect to <https://education.github.com> and request for a student account. You might need to wait a few days for the GitHub folks to process it—so make your request as soon as possible.

Once you have gotten an account:

- Create a private repository called *cmsi284*
- Add my GitHub account, *dondi*, as a collaborator for that private repository

Git Software Setup

Install *git* on the computer(s) where you will be doing work for this course. There are many ways to install the software, so no single set of instructions can be provided. This GitHub help page can get you going:

<https://help.github.com/articles/set-up-git>

If you get stuck, ask me.

Google Account

I will occasionally screengrab class sessions and post them to YouTube so that you can review them as needed. These recordings will be private, so I will need a Google account in order to give you access. Set one up if needed. In this case, a *non-LMU* Google account tends to work better.

How to Turn It In

Because this is private information, we will use the Blackboard/MyLMUConnect site for this course to submit:

- Your GitHub repository URL
 - The Google account for class screen grabs
- ...under *Assignment 0119*.
