

**CMSI 182**  
**INTRODUCTION TO COMPUTER SCIENCE**  
Fall 2006

**Assignment 1003**

Consider this to be part of your midterm review; we will go over, answer, and discuss the questions in this assignment on Tuesday.

**Not for Submission**

1. Read Chapter 4 in the Brookshear book.
2. Review Chapters 0 to 4 in the Brookshear book, as well as the handouts provided so far.

**For Submission**

Bring all work on hardcopy for our October 3 class. Instead of collecting the papers, I will simply take note of who did the work, then let you take your work back home as a study aid.

1. Do the following chapter review problems from Chapter 3 of the Brookshear book: 1, 2, 13, 15, and 18.
2. Do the following chapter review problems from Chapter 4 of the Brookshear book: 1, 10, 14, and 23.
3. Draw the small HTML documents in chapter review problems 4.25 and 4.26 (page 190) as tree diagrams reflecting the structure expressed by those documents' tags.

(We might not get to #3 during our September 28 session, in which case we will just go over it in class on October 3 — nevertheless, the information to do this is mostly available in the textbook, so there's no harm in giving it a shot.)
