

(each of these leads to their own versions of the items below)

---

Each picture gallery is distinct but all should work the same way: either slideshow style or thumbnail-select. If possible, create guides for each picture showing who's who. The who's who can link to the family tree(s) so we know if they're a cousin, uncle/aunt, etc.

Movie guides are also distinct but work similarly: choose among them (maybe with embedded mini-movies?) then play the selection.
