

The Tsunami of 2004

Multimedia application about the South Asia tsunami of 2004.

- chronological narrative of events
- science background on tsunami
- “play-by-play” of geologic event and subsequent effects (ending in the tsunami)
- charts and graphs of results: victims, property damage, donations
- galleries of images, sound bites, and video
 - satellite photos
 - home video
 - quotes from assorted leaders, victims
- profiles of the affected countries (with maps)

Use interactive map to navigate from country to country. Also use an interactive timeline display to express the sequence of events — one for the nature stuff and another for the events after that. Graphs should also be interactive; zoom in and out, filtering of data categories. If possible, try to do before-and-after on satellite photos.
