Assignment 0301

It's time to flesh out your kernel project for the semester, or at least, express your interests enough detail so that we can craft a decent project for you.

Not for Submission

Post-midterm material starts in SGG Chapter 6, so you should be that far into the text at this point.

For Submission

Write your kernel project proposal as a plain text file and commit it to CVS under */projects/cmsi387* as a file named *readme.txt*. Your kernel project proposal will eventually morph into a README file that potential users of the project will find useful when downloading, installing, or running your project for the first time. Include any details, features, or requirements that you have at this point in time; this will help in refining and finalizing your project. Tag this initial version as *hm-0301*.

Over the next two weeks, we'll work toward a final version of your project proposal, editing your *readme.txt* file as we go.
