Spring 2010

Assignment 0128

This assignment is primarily reading, just to get things started, plus the usual CVS setup.

Not for Submission

1. Read Chapters 1 and 2 in SGG.
2. Run the *setup-class* script for class *cmsi387* or *cmsi587* and user *dondi*.
3. Start using the command line a little more, particularly for routine activities like manipulating and viewing files or looking up manual pages. If you're curious about whether a particular command exists for doing something, ask me.
